

Weeks 5 - 6: Testing & Refinement Phase

1. Functional Testing

- Test all implemented features to ensure they work as expected.
- Validate user authentication, course management, and video playback.
- Verify API responses and database interactions.

2. Performance Testing

- Measure API response times and optimize queries.
- Test app loading speed and responsiveness on different devices.
- Identify bottlenecks and improve efficiency.

3. Security Testing

- Check for authentication and authorization vulnerabilities.
- Ensure data encryption and secure API communication.
- Conduct penetration testing to identify potential threats.

4. Bug Fixing & Refinements

- Fix reported bugs and retest affected functionalities.
- Improve UI/UX based on user feedback.
- Ensure smooth navigation and proper error handling.

5. Final Review & Approval

- Conduct a final round of testing with real user scenarios.
- Get approval from stakeholders before deployment.
- Prepare documentation for deployment and maintenance.
